- Download tool from
  https://github.com/tzutalin/labelImg/files/2638199/windows_v1.8.1.zip
- Extract the zip file
- Open the folder, double click on labelImg.exe
- Load images directory by clicking 'Open Dir' button

- Once image directory is selected, another dialog box will be opened automatically
  - The annotations you will do will be saved in a file (.txt), create a new folder with
    name 'labels' and select it
- Annotations can be saved in two formats either Yolo or Pascal format, change the format
  to YOLO from the left pan of tool(see above image for reference)
- Press 'w' from keyboard to start drawing the bounding box

- Drag the mouse cursor from the start of object till end
- Draw tight bounding boxes around the object
- Give the required title to the object
- Press 's' from keyboard to save the annotations
- Press 'd' from keyboard for next image
- Press 'a' from keyboard for previous image
- After doing one image press 'd' to move to the next image and then check previous image by pressing 'a' to make sure everything is working fine
- Also read instructions at https://github.com/tzutalin/labelImg
